# CO1 - Short Answers

Name: T. Hitheesh Kumar

Regno: 19852405 1

1. Define cloud Computing and four characteristics

Cloud Computing is the delivery of Computing Services Over the Internet.

* On Demand Services: Resource are available whenever needed.
* Network access: Services are accessible through the Internet.
* Raid elasticity: Resources can be increased or decreased quickly.

2. Evolution of cloud Connectivity:

* Mainframes: Central Computer Served Multiple Users.
* Personal Computers: Enabled remote access to Services Accessible
* Internet: Enabled remote to Service.
* Virtualization: One Server cloud run Multiple Virtual Machine.
* Modren cloud: Platform like AWS provide Scalable Services Online.

3. Server Virtualization and cloud components.

Virtualization: Creates Multiple Virtual Machine on One Physical Server Using a hypervisor.

Cloud Computing: Delivers Computing resource: of Services Over the Internet.

Difference:

Virtualization is a technology, while cloud computing is a service model.

4. Role of Data Centers:

* Store data and Applications
* Provide computing power
* Connect servers through Networks
* Protect data using Security Mechanism
* Ensure Availability through backup system

5. Iaas, Paas, Saas and Xaas

| Model | Meaning | Example |
|---|---|---|
| Iaas | Infrastructure as a service | Amazon EC2 |
| paas | Platform as a service | Google App Engine |
| Saas | Software as a service | Microsoft 365 |
| Xaas | Everything as a service | AWS services. |
